## Stock Data for Apple since 2006

# Lets observe the retruns on the stock , on daily basis :

```
library(ggplot2)
library(ggfortify)
library(tseries)
ap_return<-diff(ap)/ap[-length(ap)]
autoplot( (diff(ap)/ap[-length(ap)]),ts.colour = 'dodgerblue4')+
  ggtitle("log returns for apple")+
  ylab("log returns")+xlab("Year")
```

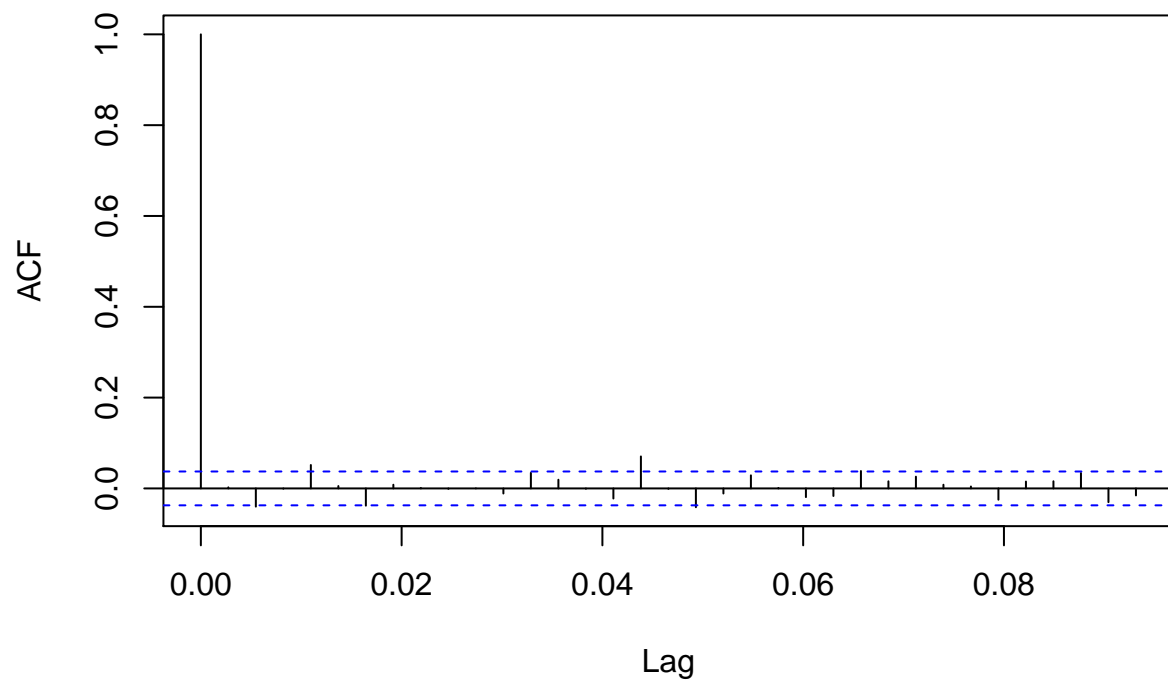

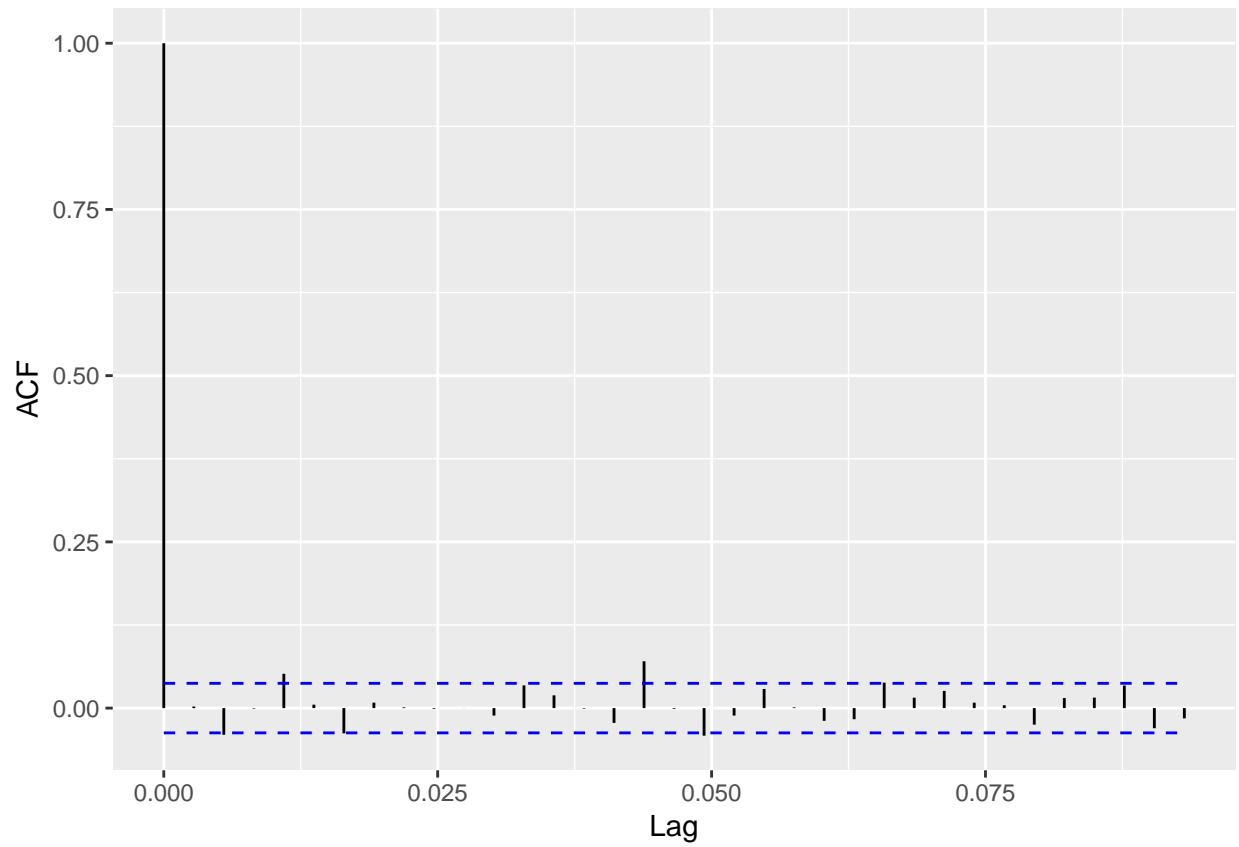

There can be easily seen the period of volatility in Apple stocks in time intervals,

so under these assumptions we need to fit a grach model on the same and analyse the volatility .
